

Weekly Training Split

The Operator Split — Legs / Push / Pull / VO2 / Recovery

Day	06:30 – 09:00	16:30 – 18:00	21:00 Night	Yoga pairing
MON	Cold Plunge	HEAVY LEGS	Tulsi	Half Pigeon (hip flexors)
TUE	Fasted Cardio (Zone 2)	PUSH DAY	Tulsi	Cobra / Upward Dog (chest/shoulders)
WED	Cold Plunge	PULL DAY	Saffron	Thread the Needle (thoracic/biceps)
THU	VO2 Max 4x4	Active Recovery / Walk	Ashwagandha (mandatory)	Legs Up the Wall (vagal tone)
FRI	Cold Plunge	LIFT ROTATOR + Tofu Pulse	Ashwagandha (mandatory)	Full Body Flush
SAT	Active Yoga (15–20 min)	3-Cycle Contrast Therapy	Saffron	CNS Reset
SUN	Batch Meal Prep	Rest / Walk	Tulsi	Gentle Mobility

Diet Adjustments by Day Type

Day type	12:00 Quinoa	17:30	17:50 Casein	14:30 Dressing
Heavy Lift	½ cup	Whey + creatine (strict window)	1 scoop	4 tbsp
VO2 Max (Thu)	¾ cup +50%	Whey + creatine	1 scoop	4 tbsp

Rest / Cardio	¼ cup	Whey + creatine	SKIP (no mechanical damage)	2–4 tbsp
---------------	-------	-----------------	--	----------

■ **COLD PLUNGE RULE** — NEVER immediately after heavy lifting. Blunts mTOR / growth signal. Min 6 hours separation (cold 06:30 → lift 16:30 is correct). Morning 'fried'? Swap cold plunge for restorative yoga, skip Matcha.

VO2 Max 4x4 Progression — do not skip stages

Stage	Who	Protocol
Stage 1	Novice	Zone 2 fasted walk/jog only — no 4x4s
Stage 2	Intermediate (4–8 wk)	2x4 intervals (2 reps instead of 4). Monitor HRV.
Stage 3	Operator	Full 4x4: 4 min max effort → 3 min active recovery → repeat x4. Only proceed if resting HR is stable and 21:00 Ashwagandha is maintained.

Yoga & Thermal Protocols

Autonomic reset sequences + thermal hormesis methods

Yoga Sequences — which to use when

Sequence	When	Duration	Key moves
Active Morning	Replace 06:30 cardio on low-cortisol mornings	15–20 min	Child's Pose → Cat-Cow ×10 → Downward Dog → Ragdoll → Sun Salutation A ×3–5 → Warrior II → Hanuman Dand ×10 → Savasana
Restorative (Cortisol Day)	Morning if 'fried' OR 21:00 night infusion window	15–20 min	Supported Child's Pose 3–4 min → Supine Spinal Twist 2 min/side → Reclined Bound Angle 3–4 min → LEGS UP WALL 5 min → Savasana
Post-Lift Stretch	Immediately post-workout or active recovery days	10–15 min	Lizard Lunge 2 min/side → Half Pigeon 2 min/side → Thread the Needle 1 min/side → Seated Forward Fold 2 min

Restorative breath: inhale 4 sec · exhale 8 sec. Night yoga: sip Tulsi or Saffron during or immediately after.

Mantra: 'So' on inhale, 'Hum' on exhale — interrupts anxiety loop.

Thermal Hormesis — three methods

Method	When	Protocol	Rule
A — Daily Maintenance	Daily	Cold plunge 06:30 + Sauna 18:30 (separate)	Re-warm naturally 10–15 min after cold plunge — activates Brown Adipose Tissue
B — Efficiency Pump	2–3×/week	Sauna 15 min → Cold Plunge 3 min (immediate transition)	ALWAYS end on cold. Trains endothelial lining.

C — Weekly Vascular Flush	1×/week (Sat)	3 continuous cycles: Sauna → Cold → Sauna → Cold → Sauna → Cold	ALWAYS end on cold. Wait 15 min before warm hydration.
----------------------------------	---------------	--	--

Targeted Yoga Pairings by Lift Day

Lift Day	Mechanical stress	Key pose	Why
Mon — HEAVY LEGS	Hip flexors / glute fatigue	Half Pigeon	Unlocks piriformis + glutes — reduces DOMS
Tue — PUSH	Internal shoulder rotation	Cobra / Upward Dog	Chest opening counteracts pec shortening
Wed — PULL	Thoracic compression / biceps	Thread the Needle	Thoracic rotation + rear delt stretch
Fri — FULL ROTATOR	Systemic CNS load	Legs Up the Wall	Vagal nerve stimulation → fastest HRV recovery

■ Ice bath > cryo chamber. Water is 25× more thermally conductive than air — core cooling triggers the sustained dopamine/noradrenaline spike and BAT activation. Cryo creates an insulating skin boundary layer and cannot replicate this.
