

Produce Cleaning

Mandatory before every batch — both baths single-use only

① Alkaline Soak

Water	Baking Soda	Soak Time
1 gallon	1 tbsp	12–15 min
1 quart	$\frac{3}{4}$ tsp	12–15 min
1 cup	$\frac{1}{4}$ tsp	12–15 min

Use cold water. Fully submerge. Removes up to 96% of surface pesticides.

② Acid Rinse (fresh bowl, fresh water)

Water	Vinegar	Rinse Time
1 cup	1–2 tbsp	2–3 min
1 quart	4–8 tbsp	2–3 min

White vinegar or ACV. Kills residual bacteria; neutralises baking soda residue. Do not shorten to a splash — minimum 2 min at this dilution.

③ Plain Cold Water Rinse

30-second rinse to remove vinegar taste.

④ Dry — Mandatory

Spin dry or pat with paper towels. Storing wet causes rapid oxidation and nutrient loss.

■ **BOTH BATHS ARE SINGLE-USE — discard after every batch. Reusing recontaminates the next batch.**
