

Weekly Training Split

The Operator Split — Legs / Push / Pull / VO2 / Recovery

Day	06:30 – 09:00	16:30 – 18:00	21:00 Night	Yoga pairing
MON	Cold Plunge	HEAVY LEGS	Tulsi	Half Pigeon (hip flexors)
TUE	Fasted Cardio (Zone 2)	PUSH DAY	Tulsi	Cobra / Upward Dog (chest/shoulders)
WED	Cold Plunge	PULL DAY	Saffron	Thread the Needle (thoracic/biceps)
THU	VO2 Max 4x4 (full intervals)	Active Recovery / Walk	Ashwagandha (mandatory)	Legs Up the Wall (vagal tone)
FRI	Cold Plunge	LIFT ROTATOR + Tofu Pulse	Ashwagandha (mandatory)	Full Body Flush (Legs Up the Wall)
SAT	Active Yoga (15–20 min)	3-Cycle Contrast Therapy	Saffron	CNS Reset
SUN	Batch Meal Prep	Rest / Walk	Tulsi	Gentle Mobility

Diet Adjustments by Day Type

Day type	12:00 Quinoa	17:30	17:50 Casein	14:30 Dressing
Heavy Lift	½ cup	Whey + creatine (mandatory — strict window)	1 scoop	4 tbsp
VO2 Max (Thu)	¾ cup (+50%)	Whey + creatine	1 scoop	4 tbsp
Rest / Cardio	¼ cup	Whey + creatine	SKIP (no mechanical damage)	2–4 tbsp

■ **COLD PLUNGE RULE** — NEVER immediately after heavy lifting. Blunts mTOR / muscle growth signal. Minimum 6 hours between cold plunge and lift (cold at 06:30 → lift at 16:30 is correct). If you feel 'fried' in the morning — swap cold plunge for restorative yoga, skip Matcha.

VO2 Max 4x4 Progression — do not skip stages

Stage	Who	Protocol
Stage 1	Novice	Zone 2 fasted walk/jog only — no 4×4s
Stage 2	Intermediate (4–8 wk)	2×4 intervals (2 reps instead of 4). Monitor HRV.
Stage 3	Operator	Full 4×4: 4 min max effort → 3 min active recovery → repeat ×4. Proceed only

Yoga & Thermal Protocols

Autonomic reset sequences + thermal hormesis methods

Yoga Sequences — which to use when

Sequence	When	Duration	Key moves
Active Morning	Replace 06:30 cardio on low-stress mornings	15-20 min	Child's Pose → Cat-Cow × 10 → Downward Dog → Ragdoll
Restorative (Cortisol Day)	Morning if 'fried' OR 21:00 if not	15-20 min	Supported Child's Pose 3–4 min → Supine Spinal Twist 2 min
Post-Lift Stretch	Immediately post-workout	10-15 min	Legs Up the Wall 2 min/side → Half Pigeon 2 min/side → Thread the Needle

Restorative breath: inhale 4 sec · exhale 8 sec. Night yoga: sip Tulsi or Saffron during or immediately after.
Mantra option: 'So' on inhale, 'Hum' on exhale — interrupts anxiety loop in Default Mode Network.

Thermal Hormesis — three methods

Method	When	Protocol	Rule
A — Daily Maintenance	Daily	Cold plunge 06:30 + Sauna 18:30 (separated)	Re-warm naturally 10–15 min after cold plunge
B — Efficiency Pump	2x/week	Sauna 15 min → Cold Plunge 3 min (immediate transition)	ALWAYS end on cold. Trains endothelial lining
C — Weekly Vascular Flush	1x/week (Sat)	3 continuous cycles: Sauna → Cold → Sauna → Cold → Sauna → Cold	ALWAYS end on cold. Wait 15 min before drinking

Targeted Yoga Pairings by Lift Day

Lift Day	Mechanical stress	Key pose	Why
Mon — HEAVY LEGS	Flexors / glute fatigue	Half Pigeon	Unlocks piriformis + glutes — reduces DOMS and
Tue — PUSH	Internal shoulder rotation	Cobra / Upward Dog	Thoracic/chest opening counteracts pec shortening
Wed — PULL	Thoracic compression / Thoracic rotation	Thread the Needle	Thoracic rotation + rear delt stretch — prevents
Fri — FULL ROTATION	Autonomic CNS load	Legs Up the Wall	Vagal nerve stimulation → fastest HRV recovery

■ Ice bath > cryo chamber. Water is 25× more thermally conductive than air — core cooling triggers the sustained dopamine/noradrenaline spike and BAT activation. Cryo creates an insulating skin boundary layer and cannot replicate this.
