

# Chutney Prep & Blanching

2-week batch · Blanch → Blend → Freeze · done in order below

## ① Blanching — Do First (applies to cilantro AND mint)

| Step | Action                                                                       | Time                     |
|------|------------------------------------------------------------------------------|--------------------------|
| 1    | Bring pot of water to a rolling boil                                         | —                        |
| 2    | <b>Submerge cilantro + ALL mint together in boiling water</b>                | <b>10–15 sec EXACTLY</b> |
| 3    | Transfer immediately to ice bath ( $\geq 1:1$ ice:water)                     | 30 sec                   |
| 4    | Squeeze out excess water thoroughly                                          | —                        |
| 5    | Separate into two piles: cilantro+some mint → chutney / mint only → Jaljeera | —                        |

Why blanch: deactivates polyphenol oxidase (PPO) — the browning enzyme. 10–15 sec deactivates PPO only; chelation compounds and color are preserved.

## ② Curry Leaf Tadka — 1 pan, 5 min · makes ~21 cubes

| Ingredient            | Amount          | Notes                                               |
|-----------------------|-----------------|-----------------------------------------------------|
| Avocado / coconut oil | 7 tbsp (~½ cup) | The fat carrier — extracts alkaloids                |
| Mustard seeds         | 1 tbsp          | Add first — wait for pop (~20 sec)                  |
| Fresh curry leaves    | 1 cup packed    | Rough-chop into ½" pieces before pan                |
| Dried red chili       | 1–1½ tsp flakes | Break into flakes — distributes across all 21 cubes |
| Hing (asafoetida)     | ¼ tsp           | Add with curry leaves + chili                       |

Method: heat oil → mustard seeds pop → add curry leaves + chili + hing → BLOOM 15–20 SEC (use a timer) → off heat → cool 5 min → stir → pour 1 tsp per mini cube cell.

■ Beyond 30 sec bloom → alkaloids degrade. Do not exceed 20 sec.

### ③ Cilantro Chutney — 1 Vitamix run · ~17–18 cubes

| Ingredient              | Amount        | Notes                                             |
|-------------------------|---------------|---------------------------------------------------|
| Cilantro (blanched)     | 4 cups packed | From blanching step                               |
| Fresh mint (blanched)   | 2 cups packed | Optional — adds brightness                        |
| Frozen avocado          | ½ cup         | Add to blender first with aquafaba                |
| Aquafaba                | 1 tbsp        | Saponins emulsify avocado fat — add BEFORE herbs  |
| Thai green chilies      | 4–5           |                                                   |
| Garlic (rested 10 min)  | 4 cloves      | Crush and rest 10 min for allicin before blending |
| Fresh ginger            | 1 inch knob   |                                                   |
| Lemon juice             | 4 tbsp        | ACID LOCK — critical for color and preservation   |
| Black salt (kala namak) | 1 tsp         |                                                   |
| Roasted cumin powder    | 1 tsp         |                                                   |

*Blend order: aquafaba + frozen avocado 20 sec → add herbs + everything else → blend 60–90 sec. Pour ~2 tbsp per cube. Freeze immediately.*

# Chutney Prep (continued)

Coconut chutney · Jaljeera concentrate

## ④ Coconut Chutney — 3-Week vs 3-Month

|                       | 3-Week Batch                                                                                                                        | 3-Month Batch                                                                                              |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|
| Curry leaves in blend | YES — raw into Vitamix (volatile aromatics)                                                                                         | NO — plain base only (leaves go in tadka cubes only)                                                       |
| Vitamix runs          | 2 runs × 4 cups coconut + curry leaves → 48 cubes                                                                                   | 2–3 runs × 4–6 cups coconut (no leaves) → ~128 cubes                                                       |
| Tadka (separate)      | 7 tbsp oil · 1 cup fresh curry leaves<br>1 tbsp mustard seeds · 1½ tsp chili flakes<br>· ¼ tsp hing<br>→ 21 mini cubes (1 tsp each) | 4 tbsp oil · frozen curry leaves<br>½ tsp mustard seeds · 20–30 sec bloom<br>→ ~14 mini cubes (1 tsp each) |
| Freeze life           | 3 weeks                                                                                                                             | 3 months                                                                                                   |

Why the difference: at the 3-week session fresh curry leaves are available — some go raw into the Vitamix (volatile aromatics + flavonoids), some go into the tadka (alkaloid extraction into oil). At the 3-month session only frozen leaves are on hand → tadka only.

## Tadka at Serving (Always Separate — Never Freeze Into Base)

| Format                  | How to use                                                                                                                                               |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Tadka cube (from batch) | Drop 1 cube into warm pan · melt 10 sec · pour immediately over thawed coconut chutney. Stir and serve within 5 min — volatile aromatics dissipate fast. |
| Fresh tadka (day-of)    | 1 tsp oil · 8–10 curry leaves · ¼ tsp mustard seeds → heat until seeds pop + leaves crisp (15–20 sec) → pour over thawed base. Dried chili optional.     |

|                                          |                                                                                                                           |
|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>Frozen curry leaves<br/>(no cube)</b> | Crumble 4–5 frozen leaves directly into hot oil — same effect as fresh tadka. Always end tadka on the chutney, not in it. |
|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|

## 3-Week Coconut Chutney — per Vitamix run (do 2 runs)

| Ingredient           | Per run     | × 2 runs |
|----------------------|-------------|----------|
| Fresh grated coconut | 4 cups      | 8 cups   |
| Fresh curry leaves   | 3–4 tbsp    | 6–8 tbsp |
| Green chili          | 4–5         | 8–10     |
| Fresh ginger         | 2 inch knob | ~180g    |
| Roasted cumin powder | 2 tsp       | 4 tsp    |
| Lemon juice          | 4 tbsp      | 8 tbsp   |
| Water or aquafaba    | ½ cup       | 1 cup    |
| Salt                 | 1 tsp       | 2 tsp    |

Blend 90 sec per run until smooth. ~24 cubes per run. Rinse blender 10 sec between runs.

## ⑤ Jalieera Concentrate — 1 Vitamix run : ~21 cubes

| Ingredient       | Amount for 21 servings | Notes                                |
|------------------|------------------------|--------------------------------------|
| Mint (blanched)  | ~2 cups packed         | From blanching step — mint only pile |
| Thai green chili | 10–12 chilies          |                                      |
| Fresh ginger     | 7 tbsp (~200g)         |                                      |
| Lemon juice      | ~1¼ cups (~7 cubes)    | Or use frozen lemon cubes            |

|                    |                 |                                     |
|--------------------|-----------------|-------------------------------------|
| <b>ACV (raw)</b>   | <b>~1¼ cups</b> |                                     |
| <b>Avocado oil</b> | <b>3½ tbsp</b>  | Lipid lock — traps volatile menthol |
| <b>Hing</b>        | <b>½ tsp</b>    |                                     |

*Blend 60 sec. Taste: sharp, minty, spicy, bright. Pour ~2 tbsp per cube. 21 cubes = 3-week supply at 1/day.*

*At serving: add fresh black salt + roasted cumin + ACV + cold/sparkling water. Never put black salt or cumin in the frozen cube (osmosis bleeds water from paste).*

---

■ **ACID LOCK IS MANDATORY in cilantro chutney — 4 tbsp lemon juice minimum. Skipping causes oxidation and grey-green color within 24h even frozen.**

## Freeze Stability Reference

| Item                                                | Shelf life frozen | Cube size                            |
|-----------------------------------------------------|-------------------|--------------------------------------|
| <b>Tadka cubes</b>                                  | 4–6 weeks         | 1 tsp (mini tray)                    |
| <b>Jaljeera cubes</b>                               | 3 weeks           | ~2 tbsp (regular tray)               |
| <b>Cilantro chutney</b>                             | 3 weeks           | ~2 tbsp (regular tray)               |
| <b>Coconut chutney (3-week / with curry leaves)</b> | 3 weeks           | ~2 tbsp (regular tray)               |
| <b>Coconut chutney (3-month plain base)</b>         | <b>3 months</b>   | ~2 tbsp (regular tray)               |
| <b>Imli-Khajur chutney</b>                          | <b>6 months</b>   | ~2 tbsp (regular tray) — see card 13 |
| <b>Mint muddle cubes</b>                            | 4–6 weeks         | 1 tbsp (mini tray)                   |
| <b>Fenugreek paste</b>                              | 4–6 weeks         | 1 tbsp (mini tray)                   |
