

Infuser Spa Waters

Protocol-compatible hydration • helps reach 3–4L daily target

① Waters & Recipes

Water	Ingredients	Window	Notes
Cucumber + Mint	1 cucumber sliced + 10 mint leaves	All day	Zero conflicts. Classic cooling. Best daily driver — fill and refill.
Fennel + Lemon	1 tsp fennel seeds + lemon slices	Between meals	Pro-kinetic, digestive. Good in the 12:00–17:50 gap.
Tulsi + Lemon	8–10 tulsi leaves + lemon slices	11:00–16:00	Adaptogenic daytime water. Distinct from 21:00 night infusion — no cycling conflict at this dose.
Rose + Cardamom	10 dried rose petals + 2 cardamom pods (cracked)	Afternoon	Phantom sweetness. Anti-inflammatory. Zero protocol conflicts.
Hibiscus cold brew	1 tsp dried hibiscus + cold water, steep 2h	Before 10:00 or after 14:30	Mild tannins — keep away from 12:00 iron window.
Ginger + Lemon	Thin ginger coins + lemon slices	Morning / midday	Mild pro-kinetic. Lower potency than 09:15 hot pulse — not a replacement.

② The Tannin Rule

Avoid hibiscus (and rosehip) in the **11:00–13:00** window. Vitamin C from your 12:00 meal is actively pulling non-heme iron from legumes. Tannins block iron absorption at the same binding sites — you undo the Vitamin C work. Consume hibiscus before 10:00 or after 14:30.

③ Infuser Tips

Tip	Detail
Cold steep	Refrigerate 1–2h for full flavor. Prep at 07:00, ready at 09:00.
Immediate use	Cucumber + mint release quickly — cold water works right away.
Refill rule	One fill of ingredients → 2–3 refills of water. Discard after 8h (tulsi/fennel) or 24h (cucumber).
No sweeteners	Cardamom + rose + fennel provide phantom sweetness — no honey, no stevia.

④ Daily Fluid Targets

Day type	Target
Training day	3–4L total (water + infusions + meals). Stay at upper end on creatine days — it draws water into muscle cells.
Rest day	2.5–3L total.

*Daily driver: **Cucumber + Mint** — fill the infuser in the morning, carry it, refill throughout the day. Everything else is rotation or occasion-specific.*
