

Supplement Cycling

What cycles · what's daily · what conflicts with what

① Cacao Nibs — 2–3x per week MAX

Rule	Detail
Frequency	2–3x per week — never daily. Pulsing prevents receptor downregulation.
Window	17:50 Recovery Bowl only — yogurt MUST be present (~200mg Ca binds oxalates)
Vanilla pairing	Add vanilla extract ONLY on cacao days — not daily baseline
Chocolate whey (17:30)	Counts as one cacao exposure → skip nibs at 17:50 that day
Cacao + MudWtr Original same day	Double exposure — skip one. MudWtr Original has both cacao AND turmeric.

② MudWtr — Formulation Guide

Formulation	Turmeric	Cacao	Caffeine	Protocol fit
Matcha :rise ★ Best fit	None	None	55mg (matcha)	Slots into 09:15 matcha rotation. Zero new conflicts. Mushrooms: lion's mane + chaga + reishi + cordyceps.
Turmeric (caffeine-free)	Yes	None	0mg	Manageable — pull back salad turmeric dose that day. Flexible timing (no caffeine).
Original :rise	Yes	Yes	35mg (black tea)	Most conflicted — eats cacao allocation + turmeric slot. Max 1–2x/week, skip evening nibs.
:rest (evening)	?	?	0mg	Avoid — likely contains ashwagandha → stacks on 21:00 night infusion rotation. HPA axis risk.

MudWtr Matcha :rise on matcha days = swap in, not add on. Tannin rule still applies — use before 10:00 tannin deadline.

③ Night Infusion Rotation (21:00) — never daily

Infusion	Freq/w eek	When	Dose
Ashwagandha	2–3× MAX	High-cortisol · VO2 Max days (Tue mandatory) · tofu pulse days	300–600mg KSM-66 or ¼–½ tsp powder in warm alkaline water
Tulsi	2–3×	Standard recovery nights · lower stimulation	1 tsp dried leaves steeped 5–10 min
Saffron	1–2×	Parasympathetic emphasis · Week 4 washout	3–5 threads in warm alkaline water 5–10 min

Chronic daily ashwagandha → HPA receptor downregulation + emotional blunting. Rotate with tulsi/saffron on off-days.

④ Chlorella — 3 weeks on / 1 week off

Rule	Detail
Dose	3–5g/day — broken cell wall only (Sun Chlorella, NOW Foods)
Window	14:30 salad — adds direct EPA/DHA (~40–70mg) + heavy metal binding
Titrate first	Start 1–2g/day for first 3 days then escalate. Fast intro = detox response (loose stools, fatigue).
Cycle	3 weeks on → 1 week off (Week 4 washout aligns with 4-week protocol cycle)

Supplement Cycling (continued)

Daily anchors • timing map • conflict matrix

⑤ Daily / Always-On Supplements

Supplement	Dose	Window	Notes
Creatine monohydrate	5g daily	17:30	With post-workout whey. Consistency > timing. 3–4L fluid on training days.
Vitamin D3 + K2	2,000 IU D3 + 100–200mcg K2 MK-7	12:00	Fat-soluble — take with meal. K2 directs Ca into bone not arteries.
Vitamin C	250–500mg	12:00	Boosts non-heme iron absorption 2–3×. Don't exceed 500mg — binding sites saturate.
Multivitamin	1 serving	12:00 or 14:30	Must contain B12 (≥ 25 –100mcg methylcobalamin). Choose NO added iron.

⑥ Post-Workout Protein (17:30) — Whey Rules

Whey type	Rule
Unflavored isolate (target state)	Flavor with pinch sea salt + Ceylon cinnamon. No conflicts.
Chocolate whey (finishing stash)	= 1 cacao exposure → skip evening cacao nibs. Keep strictly in 17:30 window.
Vanilla/flavored whey	Artificial sweeteners — keep in 17:30 only, phase toward unflavored.

⑦ Daily Timing Map

Window	What goes here
09:15	Ajwain OR Jeera OR Matcha (OR MudWtr Matcha :rise on swap days)
12:00	D3+K2 · Vitamin C · Multivitamin · Algae oil (if using)
14:30	Chlorella 3–5g (in salad · 3 weeks on / 1 week off)
17:30	Whey isolate + Creatine 5g
17:50	Cacao nibs (2–3×/wk only · with yogurt · vanilla same day)
21:00	Ashwagandha OR Tulsi OR Saffron (rotate · never all-ashwagandha)

■ **Tannin deadline 10:00 — all tea/caffeine must finish before 10:00 to protect 12:00 iron absorption. Alkaline water: do NOT use within 60 min before/during/after 12:00 meal — neutralizes gastric acid needed for legume digestion.**
